The First Portable Diagnostic Display Solution

Now doctors and radiologists can analyze images wherever they are

**FDA Clearance**

**Dual-Monitor Solution**

**Lossless Compression**

**DICOM GSDF-Calibrated**

**Vendor Neutral**

**AI-ready Module**

## A Quick Overview

### **Rad@™ makes your diagnosis independent of your location**

At home, on the road or at the office – thanks to Rad@™, doctors can now work wherever they are. Because Rad@™ turns off-the-shelf iPad Pro into diagnostic display cleared by FDA. Hitherto it was only possible to analyze images (and write up the corresponding reports) using traditional hardware at fixed work stations. Although laptops, tablets and smartphones are certainly able to display images, the picture quality is poor and the functions are limited.

Rad@™, the new innovation from ebm Technologies, now enables images to be diagnosed reliably outside of hospitals, doctors' surgeries or other medical environments because Rad@™ can be connected easily to a laptop or PC.

This means a distinct improvement in picture quality and a second monitor can also be added without any problem. To sum up: Rad@™ gives doctors and radiologists mobile access to medical images, enabling them to make reliable diagnoses independent of their location. Anytime and anywhere.

#### » **FDA Clearance**

Rad@™ is cleared by FDA class II for diagnosis

#### » **Lossless Compression**

Rad@™ displays output up to 3MP resolution with lossless compression

#### » **Vendor Neutral**

Rad@™ supports cross-platform of PACS vendors

#### » **Dual-Monitor solution**

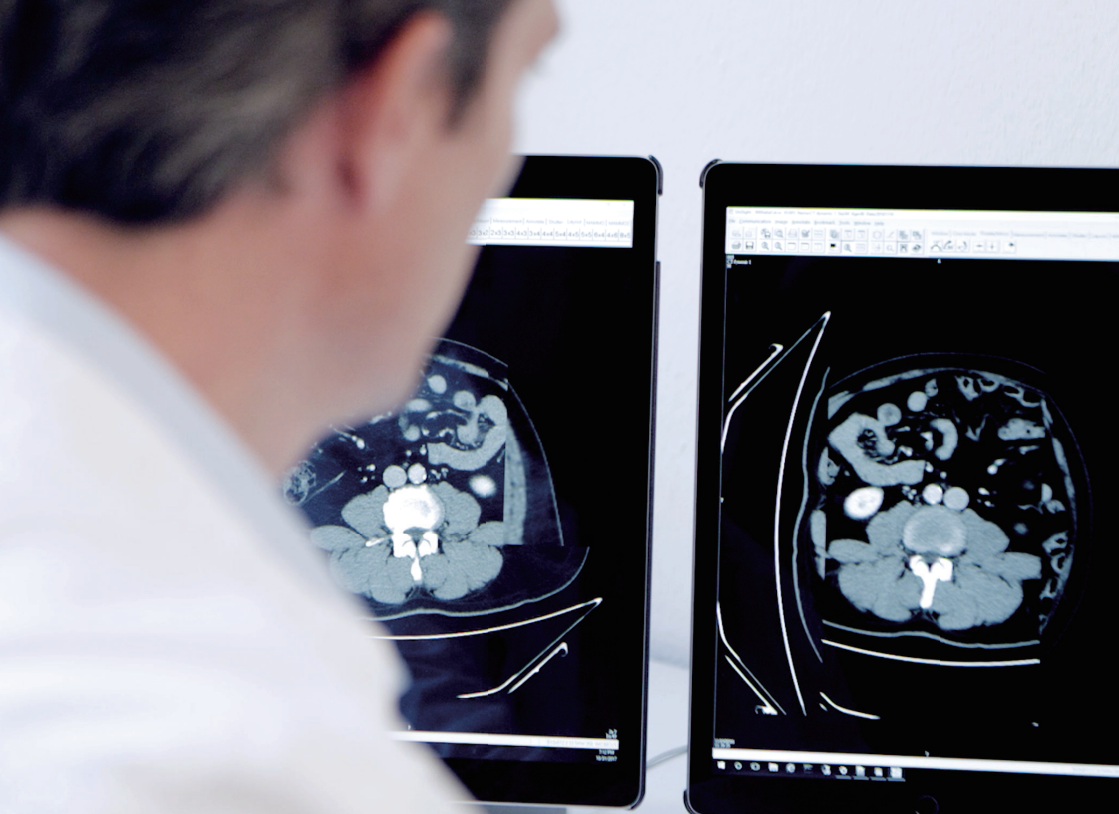

Rad@™ supports to extend displays on 2 iPad Pros

#### » **DICOM GSDF-Calibrated**

Rad@™ offers calibration service applied to DICOM GSDF

#### » **AI-ready Module**

Rad@™ serves as an edge platform for deploying AI model

## System Requirement

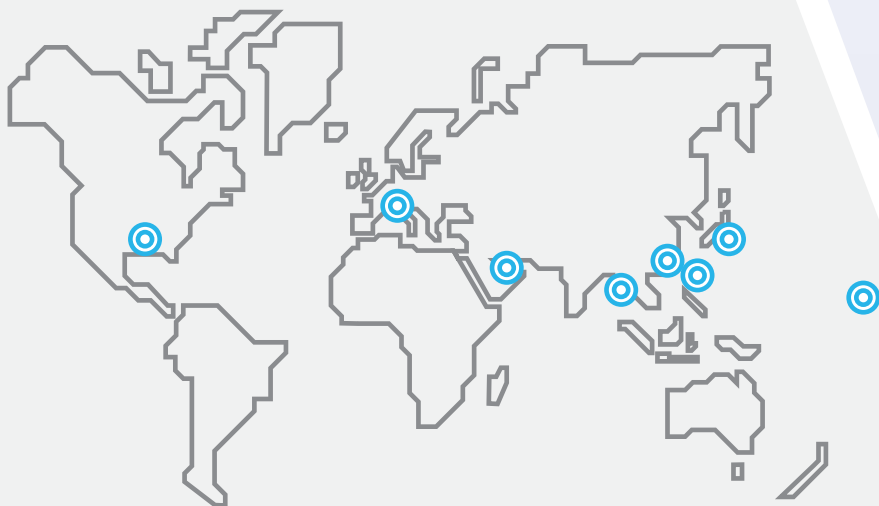

**Windows Desktop**  
Support Windows 8+

**Windows Laptop**  
Support Windows 8+

**iPad Pro® 12.9"**  
Support iOS 10+
