

AgileRIS APP

Reimagine remote reporting

AgileRIS App is an offline reporting solution turning any iPad Pro into a RIS workstation. With one iPad, AgileRIS App can run alongside the UDE App, the iPad-based picture archiving and communication system, to store medical images and report worklist locally on the device for offline access. The application provides medical professionals with flexibility while reporting on the go.

System Highlights

- » Does not influence the original RIS workflow
- » Provides offline access to reports and medical images (with UDE App)
- » Supports customizable templates and voice recognition to auto input text
- » Supports retrieving report worklists and history from RIS
- » Stores finished reports locally on the device when offline

System Workflow
