

## EXCD

### Browse Exam Images on CDs from Outside Facilities

“EXCD”, innovated by EBM Technologies, is a stand-alone image browsing solution, allowing physicians to view patients’ images stored on CDs from outside facilities immediately, and diminishing image uploading time for PACS servers. Physicians can determine if the images should be preserved to obviate the PACS servers from archiving an excessive number of images to reduce space occupancy. “EXCD”, without system integration can be implemented offline, ensuring the existing system workflow not to be disturbed.

#### System Highlights

-  Decrease Burdens on PACS Servers
-  Browse Images Stored on CDs
-  Sustain Ongoing System Workflow
-  Certified by FDA 510 (K) & TFDA

#### System Workflow
